Peddinghaus Plate Processor HSFDB-C

A BULLETIN 15 APPROVED COMPANY

- Number & letter stamping
- Plasma
- Oxy-fuel
- 12 station tool changer
- ¼" thru 4" thick
- Drill, Mill and Countersink
- Close tolerances
- 45 degree beveling up to 4" thick plate

Accuracy is the foundation of the HSFDB-C. Our CNC 5-Axis oxy-fuel torch can bevel up to 45 degrees in 4" thick plate. The plasma can bevel up to 45 degrees in 2" thick plate. The machine is capable of drilling holes up to 3" diameter in a 4" thick plate. This CNC plate processing design drives material to the operating area of the machine in order to hold closer tolerances when cutting, milling, drilling, countersinking, stamping, and tapping. Heavy-duty roll conveyors allow this machine to handle 120" x 720" plate.
